National Refuge System growing

By Bill Schulz
Associated Press Writer

Stretched like a string of pearls across the continent, the 487 pieces of land which make up the National Wildlife Refuge System provide havens for wildlife and recreation for millions of Americans.

"We've been adding about 200,000 acres a year to the system over the last decade, but more than half of that comes as additions to existing refuges," says Robert J. Shallenberger, chief of the U.S. Fish and Wildlife Service's Division of Refuges. "The average is about 10 new refuges a year."

The smallest is Mille Lacs, an island in a Minnesota lake, which is an important bird nesting area. The largest are the Yukon Delta and Arctic refuges in Alaska, at 20 million acres apiece. They make up a big part of the 91 million acres of land in the entire system.

The first refuge was Pelican Island, established in 1903 by President Teddy Roosevelt, who added 50 more by executive order.

With the dedication of the Ohio River National Wildlife Refuge in West Virginia on May 28, 1992, the refuge system reached all 50 states. The system receives 30 million visi-

tors a year. Twenty percent are hunters, the rest are there for wildlife watching or other "non-consumptive" use of wildlife.

Some refuges offer fishing and a very few, such as Chincoteague, offer recreation such as swimming, which is not related to wildlife.

But for wildlife, "we've got refuges

established for everything from butterfly species to eagles." Shallenberger says.

None of the first 51 refuges were for hunting. Later in the evolution of the system refuges were created to allow places for hunting.

When the duck stamp program was created in the late 1930s, it brought

more money for refuges. Every hunter pursuing migratory waterfowl must buy and carry a federal duck stamp. Those license fees have bought 4 million of the 14 million acres of refuge lands in the lower 48 states.

Nearly 270 of the 487 refuges now are open for some hunting.
